SUBJECT INDEX

Aluminum
— diboride 215
— trihydroxide 163
Apparatus
— for melt growth
— — by Czochralski method
— — — modified 277
— — — — of nitrobenzene 92
— — by floating zone method
— — — of barium titanate 177
— — — of cubic carbides (TiC, VC, NbC) 240
— for thin films
— — by liquid phase epitaxy
— — — of gallium arsenide 219
— — — of magnetic garnets 36
— — by sublimation, evaporation and condensation
— — — molecular beam studies 17
— arc transfer furnace
— — for nickel oxide
— — for transition metal oxides 271

Barium titanate 177
Bismuth-antimony alloy 283
Boracite
— of cobalt chloride 59
— of iron bromide 59
— of magnesium chloride 59
— of manganese chloride 59
— of nickel iodide 59
Boron (monoclinic) 259
— phosphide ($B_{14}P$) 259

Cadmium 195
— chromium sulfide 265
— fluoride doped with ytterbium fluoride 88
— oxide (fcc) 142
— sulfide 99
Carbide
— of niobium 240
— titanium 240
— of vanadium 240
CDP; $Na_3[Ce(C_7H_3NO_4)_3] \cdot 15H_2O$ 159
Cellular growth 147
Computer simulation of crystal dissolution 123
Condensation coefficient 17
Conical crystals 71
Constitutional supercooling 147, 209

Copper 86
— magnesium-nickel 209
Cyclododecane ($C_{12}H_{24}$) 83, 147

Dendritic growth 147, 163, 227, 283
Diffusion in crystal growth
— boundary layer and segregation effects 36
Dislocations
— screw 54, 289
Droplet migration 187

Electrical properties 215
Epitaxy, *see* Thin Films
— hetero
— — mismatch of lattice parameters 45
Etching
— chemical 110, 227, 265
— thermal 1
Eutectic growth
— of copper-magnesium-nickel 209
— of tin-cadmium 223

Ferrite
— nickel 67
— zinc 67

Gallium
— arsenide 219
— arsenide-phosphide 121
— selenide 54, 62, 183
— sulfide 62
Garnets 45

Hollow crystals 83

Ice 280
Impurity
— distribution 88
— inhibition of growth 203
— molecular 147
Indium
— gallium antimonide 181
— bismuth 43, 227

Kinetics
— of dissolution 187
— of growth 17, 31, 50, 71, 83, 121, 187, 195, 203, 249, 280

— — of liquid phase epitaxy films 36
— of nucleation 17, 31, 62, 71, 121, 170, 195, 203, 249

Lead germanate ($Pb_5Ge_3O_{11}$) 291
Lanthanide germanomolybdates 110
Lithium barium fluoride 10
Lithium lanthanide molybdates 110
Lithium molybdates ($Li_4Mo_5O_{17}$, $Li_2Mo_4O_{13}$) 115

Magnetic garnet films 36
Melt growth
— by arc transfer
— — of nickel oxide 271
— by Bridgman
— — of lithium barium fluoride 10
— — of pyrrhotite 235
— by Bridgman–Stockbarger
— — of GaSe 219
— by Czochralski
— — automatic control 277
— — of copper 86
— — of indium bismuth 227
— — of lithium barium fluoride 10
— — of lithium oxide–molybdenum oxide system 115
— by floating zone
— — of barium titanate 177
— — of cubic carbides (TiC, VC, NbC) 240
— by Kyropoulos
— — of lithium barium fluoride 10
— by seed growth through constriction
— — of nitrobenzene 92
— by Stockbarger
— — of cadmium fluoride doped with ytterbium fluoride 88
— by uniaxial solidification
— — of ice 280
— — of indium bismuth 227
— — of tin-cadmium 223
— by zone melting
— — of cubic carbides (TiC, VC, NbC) 240
— theory of 10
Microhardness 227
Morphological stability 209, 219
Morphology of growth 10, 31, 43, 54, 80, 83, 99, 123, 131, 142, 147

Niobium carbide (fcc) 240
Nitrobenzene (monoclinic) 92
Nonstoichiometry of crystals 235, 240
Nucleation
— heterogeneous
— — saturation density 170, 203
— secondary
— — mechanism of 163
— theory 17, 249

Perfection of crystals 45, 50, 67, 86, 110, 131, 147, 223, 227, 235, 265, 287
Perovskites 50, 177
Phase equilibrium
— of aluminum-boron 215
— of boron phosphide ($B_{14}P$) 259
— of indium-gallium-antimony 181
— of lithium oxide–molybdenum oxide system 115
Polytypism
— ordered/disordered 54
Potassium
— chloride 17, 31
— nitrate 274
Pyrrhotite ($Fe_{1-\delta}S$) 235

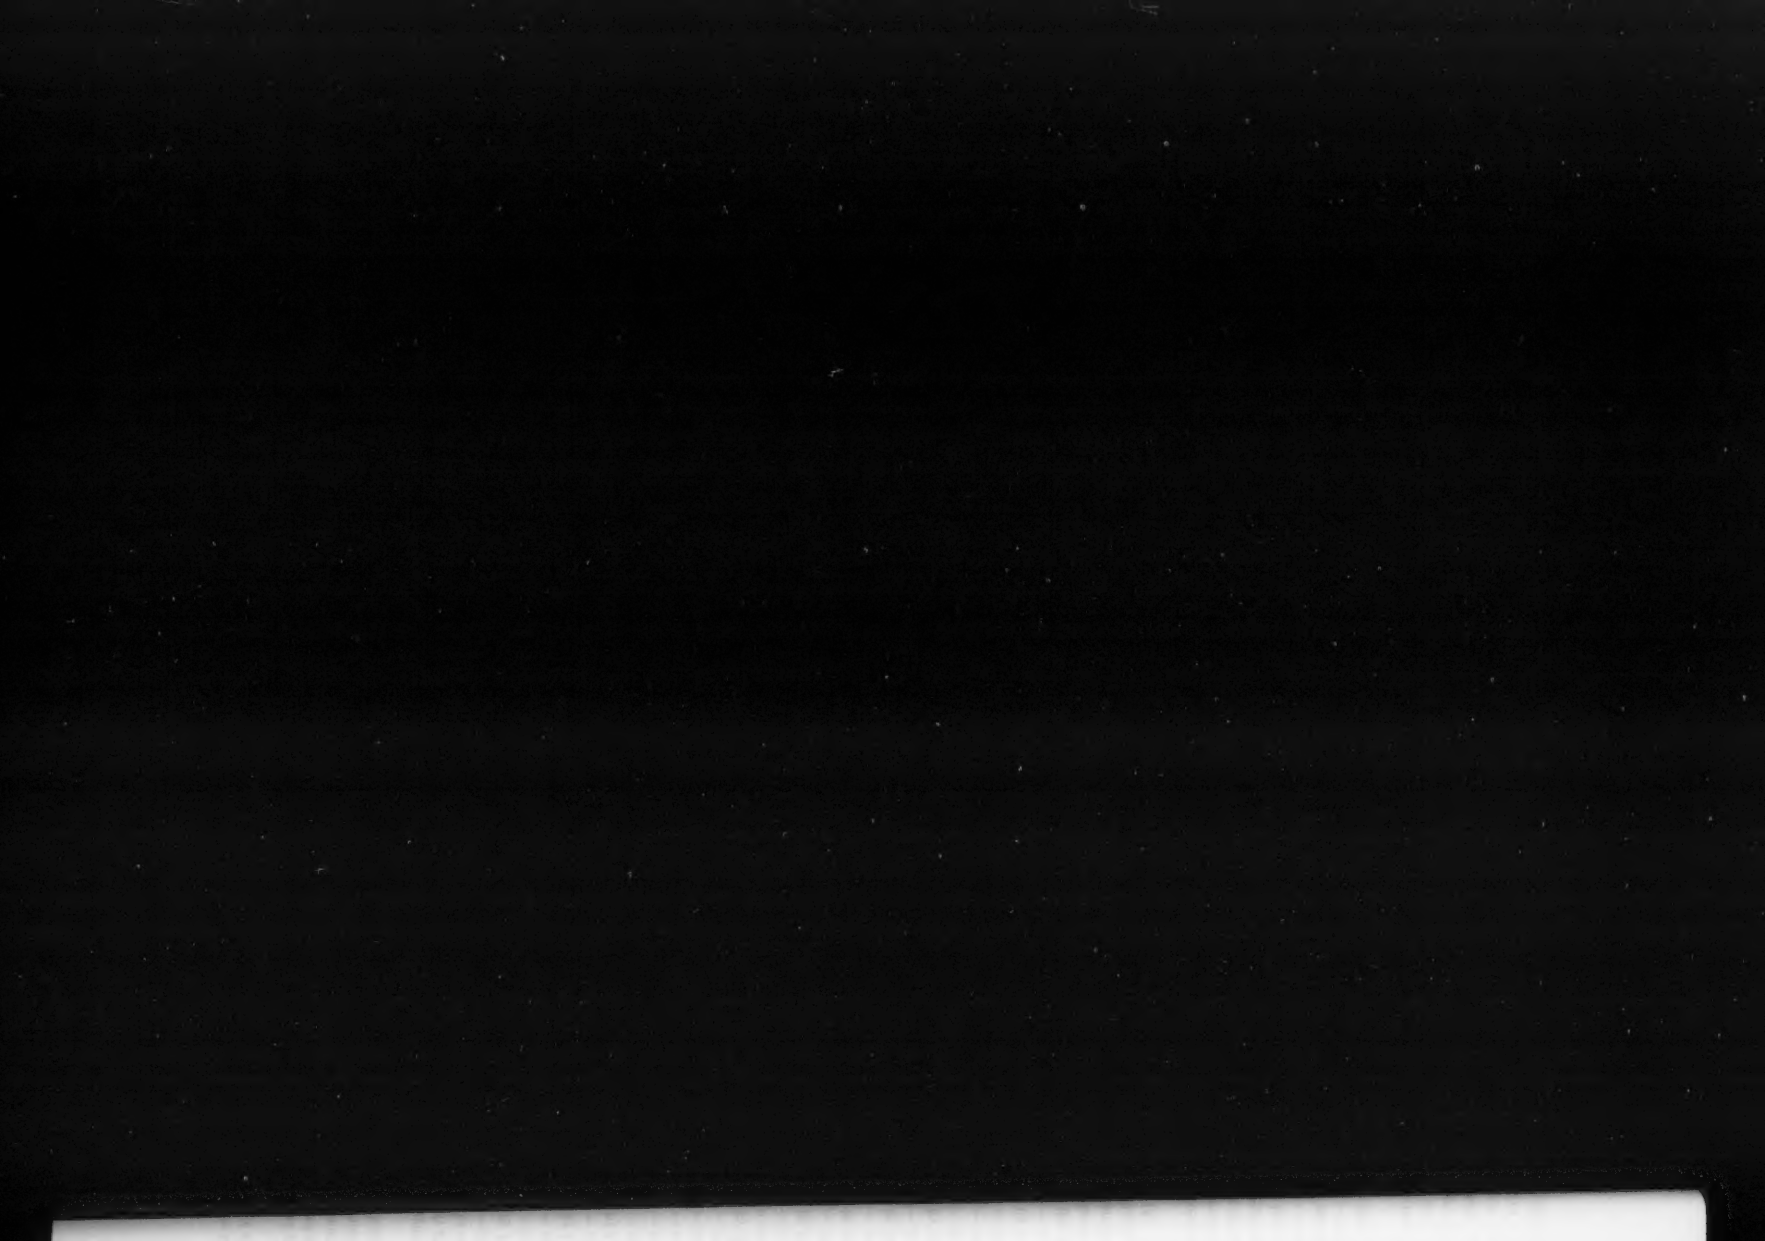
Salol ($C_{13}H_{10}O_3$) 187, 289
Silicon carbide (α-SiC) 1
Silver 80
Solid growth
— by polymorphic transformation
— — of potassium nitrate 274
— by recrystallization
— — of indium bismuth 43
Solution growth
— by evaporation
— — of potassium nitrate 274
— by flux method
— — of aluminum diboride 215
— — of gallium arsenide 219
— — of ferrites (nickel, zinc) 67
— — of lithium barium fluoride 10
— — of magnetic garnet films 36
— — of molybdates 110
— — of ytterbium orthoferrite 50
— — of triglycine sulfate 131
— by low temperature method
— — of CDP $\{Na_3[Ce(C_7H_3NO_4)_3] \cdot 15H_2O\}$ 159
— — of cyclododecane 83
— — of hollow crystals 83
— — theory of 10, 203
— from metallic solution
— — of aluminum dioxide 215
Spinel 265
Spiral growth 80
Strains
— mismatch 45
Striations 50, 283
Strontium sulphate 203
α-Sulphur (S_8) 287

Tin-cadmium 223
Titanium carbide (fcc) 240
Thin film
— by liquid phase epitaxy
— — of gallium arsenide 219
— — of indium gallium antimonide 181
— — of molybdates 110
— — of magnetic garnets 36
— — theory of 36, 45
— by vapor phase epitaxy
— — of cadmium on germanium 195
— — theory of 45, 121

Vanadium carbide (fcc) 240
Vapor–liquid–solid growth
— of pyrrhotite 235
Vapor growth technique
— by chemical transport

— — of boracites 59
— — of cadmium chromium sulfide 265
— — of carbon 71
— — of gallium selenide 54, 62
— — of gallium sulfide 62
— by chemical reduction
— — of boron phosphide 259
— by evaporation and condensation
— — of cadmium on germanium 195
— — of cadmium oxide 142
— — of cadmium sulfide 99
— — of gallium selenide 54, 62
— — of gallium sulfide 62
Vibration effect on growth
— of ice 280

Whisker growth 43, 71, 99, 195
— dislocation free 62

X-ray topography 86, 131, 287, 289, 291


Ytterbium orthoferrite 50
